./tests/test_echos --server ./echos
starting ./echos on port 4205
PASS 1: line terminated by newline [17 bytes round-tripped]
PASS 1b: multiple lines, one connection [4 lines in order]
PASS 2: max-length line, no newline [4096 bytes echoed without a newline]
PASS 2b: line longer than the buffer [6152 bytes preserved across reads]
PASS 3: no characters, then EOF [empty stream closes cleanly; bare newline echoes]
PASS 4: client killed after sending text [SIGINT handled, server still serving]
PASS 5: three simultaneous clients [3 concurrent connections, no cross-talk]
PASS 6: no zombie children after 12 connections [SIGCHLD handler reaped every child]
PASS 7: line split across TCP segments [readline() waited for the newline]
PASS 8: 8-bit clean (NUL and high bytes) [written() used the length, not strlen()]
PASS 9: 48 rapid sequential connections [except/flush loop stable]
server shut down cleanly on SIGINT
11/11 cases passed
[shihyuyang@olympus-login MP1]$
```

Ran test_echos.c; all test cases passed.

1. line of text terminated by a newline

```
If you get the error message: Failed to create home directory
Then you will need to first create your home directory. Directions are available in your browser by visiting the following web page: https://docs.ao.tamu.edu/docs/endpoints/engr-home-directory

[2026-09-20 18:06:41] 127.0.0.1:38116: echoed 26 bytes
[2026-09-20 18:07:08] 127.0.0.1:38116: echoed 3 bytes
[2026-09-20 18:12:01] 127.0.0.1:38116: EOF from client
[2026-09-20 18:12:01] 127.0.0.1:38116: connection closed (child pid 3731290 exiting)
[2026-09-20 18:18:01] 127.0.0.1:42990: accepted, handed to child pid 3884768
[2026-09-20 18:18:01] 127.0.0.1:42990: connection established (child pid 3884768)
[2026-09-20 18:18:16] 127.0.0.1:42990: EOF from client
[2026-09-20 18:18:16] 127.0.0.1:42990: connection closed (child pid 3884768 exiting)
[2026-09-20 18:31:10] 127.0.0.1:56268: accepted, handed to child pid 4055598
[2026-09-20 18:31:10] 127.0.0.1:56268: connection established (child pid 4055598)
[2026-09-20 18:31:10] 127.0.0.1:56268: echoed 4096 bytes (no newline: line limit reached)
[2026-09-20 18:31:10] 127.0.0.1:56268: EOF from client
[2026-09-20 18:31:10] 127.0.0.1:56268: connection closed (child pid 4055598 exiting)
```

Client sent 4096 bytes of 'A' without a newline; server reached the line limit and echoed all 4096 bytes successfully.

3. Line with no characters and EOF

```

```

Client sent 2 lines of text and terminated via EOF (Ctrl+D); server closed connection.

Three clients connected to the server

Executed `./tests/three_clients.sh` to run three concurrent client connections simultaneously. The server parent successfully forked three child processes (PIDs 4142739, 4142756, 4142779) to serve each client in parallel.

Executed `./tests/three_clients.sh` to run three concurrent client connections simultaneously. The server parent successfully forked three child processes (PIDs 4142739, 4142756, 4142779) to serve each client in parallel.
